*This presentation has been produced with the financial assistance of the European Union under the ENPI CBC Mediterranean Sea Basin Programme. The contents of this presentation are the sole responsibility of AUA/ ARO/ NCARE/ CRA-FRU/ UIB/ UTH and can under no circumstances be regarded as reflecting the position of the European Union or of the Programme's management structures.*

*The 2007-2013 ENPI CBC Mediterranean Sea Basin Programme is a multilateral Cross-Border Cooperation initiative funded by the European Neighbourhood and Partnership Instrument (ENPI). The Programme objective is to promote the sustainable and harmonious cooperation process at the Mediterranean Basin level by dealing with the common challenges and enhancing its endogenous potential. It finances cooperation projects as a contribution to the economic, social, environmental and cultural development of the Mediterranean region. The following 14 countries participate in the Programme: Cyprus, Egypt, France, Greece, Israel, Italy, Jordan, Lebanon, Malta, Palestine, Portugal, Spain, Syria (participation currently suspended), Tunisia. The Joint Managing Authority (JMA) is the Autonomous Region of Sardinia (Italy). Official Programme languages are Arabic, English and French ([www.enpicbmed.eu](http://www.enpicbmed.eu)).*

*The European Union is made up of 28 Member States who have decided to gradually link together their know-how, resources and destinies. Together, during a period of enlargement of 50 years, they have built a zone of stability, democracy and sustainable development whilst maintaining cultural diversity, tolerance and individual freedoms. The European Union is committed to sharing its achievements and its values with countries and peoples beyond its borders.*

*The project FruitFlyNet total budget is 1.662.872,32€ and it is financed, on an amount of 1.496.585,09€ (90 %), by the European Union (ENPI CBC Mediterranean Sea Basin Programme) through the European Neighbourhood and Partnership Instrument.*

# *Rhagoletis cerasi*, the Cherry Fruit Fly

Final Consortium Meeting December 7-10,  
2015 Athens - Volos, Hellenic Republic

Project  
funded by the  
**EUROPEAN UNION**

# *Bactrocera zonata, Dacus ciliatus* Invasive Fruit Flies

Final Consortium Meeting December 7-10,  
2015 Athens - Volos, Hellenic Republic

Project  
funded by the  
**EUROPEAN UNION**

# What makes the FRUITFLIES major pests?

Direct damage on the fruit close to maturation	High risk for economic damage Timely application of insecticides Difficulties in the use of insecticides (PHI – residues in the fruit)
Develop in the fruit	Less efficacy by pesticides but also predators and parasitoids
Mobility/invasiveness	Monitoring essential on real time basis
Extended monoculture in large areas	Difficulties in the application of control strategies / precision in monitoring and spraying
Ecological adaptation	High reproductivity, alternative host plants and food sources
Resistance to chemicals	Resistance has been commonly reported

# STRUCTURE OF PEST CONTROL SCENARIO

PEST and CROP  
MONITORING

METEREOLOGICAL DATA

DECISION

SPRAYING  
APPLICATION

FINAL  
EVALUATION

# The Location – Aware System (LAS)

## for pest control

**LAS architecture**

Project funded by the **EUROPEAN UNION**

# FRUIFLYNET EXPERIMENTATION

**AIM:** Develop the **Location Aware System (LAS)** and compare with the standard (NoLAS)

**DESIGN:** Use of randomized complete blocks (LAS, Standard, Control plots)

**DEVELOPMENTS :** E-traps, databases, Decision Support Systems, software, web services

**OPERATION: Monitoring** - Network of sensors, **Spraying** – software, web services

**EVALUATE - COMPARE: SPRAYING - INDICATORS** (spraying volume, number of spray applications etc).

# Components to compare: Standard (NO LAS) and Location Aware System (LAS)

**STANDARD  
TREATMENT**

**vs.**

**LAS**

Trapping, sampling

**PEST MONITORING**

Trapping-sampling, **direct recording**, + *use of traps with camera*

Single sensor

**METEOREOLOGICAL DATA**

**Network** of sensors, **interpolation** in large areas

Manually operated

**DECISION**

**Computer assisted**, **scale of risk**, **real time** warning

Empirically based

**SPRAYING APPLICATION**

**Location awareness:** variety, fruit load, pest and meteorological data interpolation, protected areas, controls the spraying volume, tracking

# AUA TEST SITE

## 6. SPRAYING DECISION

1.	Capture threshold	<i>A critical number is 2-5 flies per trap in 5 days for the first spraying in July, later it can be more than 5.</i>
2.	Damage threshold on the fruits during the season	<i>For the first spraying it is the first recording of fertile punctures on the fruits, for the next sprayings is the alive infestation (eggs, larvae and pupae) 1-2 or 3-5% depending on the variety and generation.</i>
3.	Fruit color or other characteristic	<i>Hardening of fruit kernel important for first spraying in July - BBCH</i>
4.	Critical climatic conditions	<i>Temperature (lower than 14°C, 33°C or higher)</i>
5.	Risk scale description and respective measures (i.e. ratio of trees to be sprayed for bait sprayings)	<i>This will be related to the captures, the damage level and the meteorological conditions.</i>

### Points to consider:

➤ Trapping and sampling data

➤ Scale of risk in LAS

# B. DSS: NOTE;

BBCH RANGE	SPRAYING
A	1st
B	2nd
C	Others

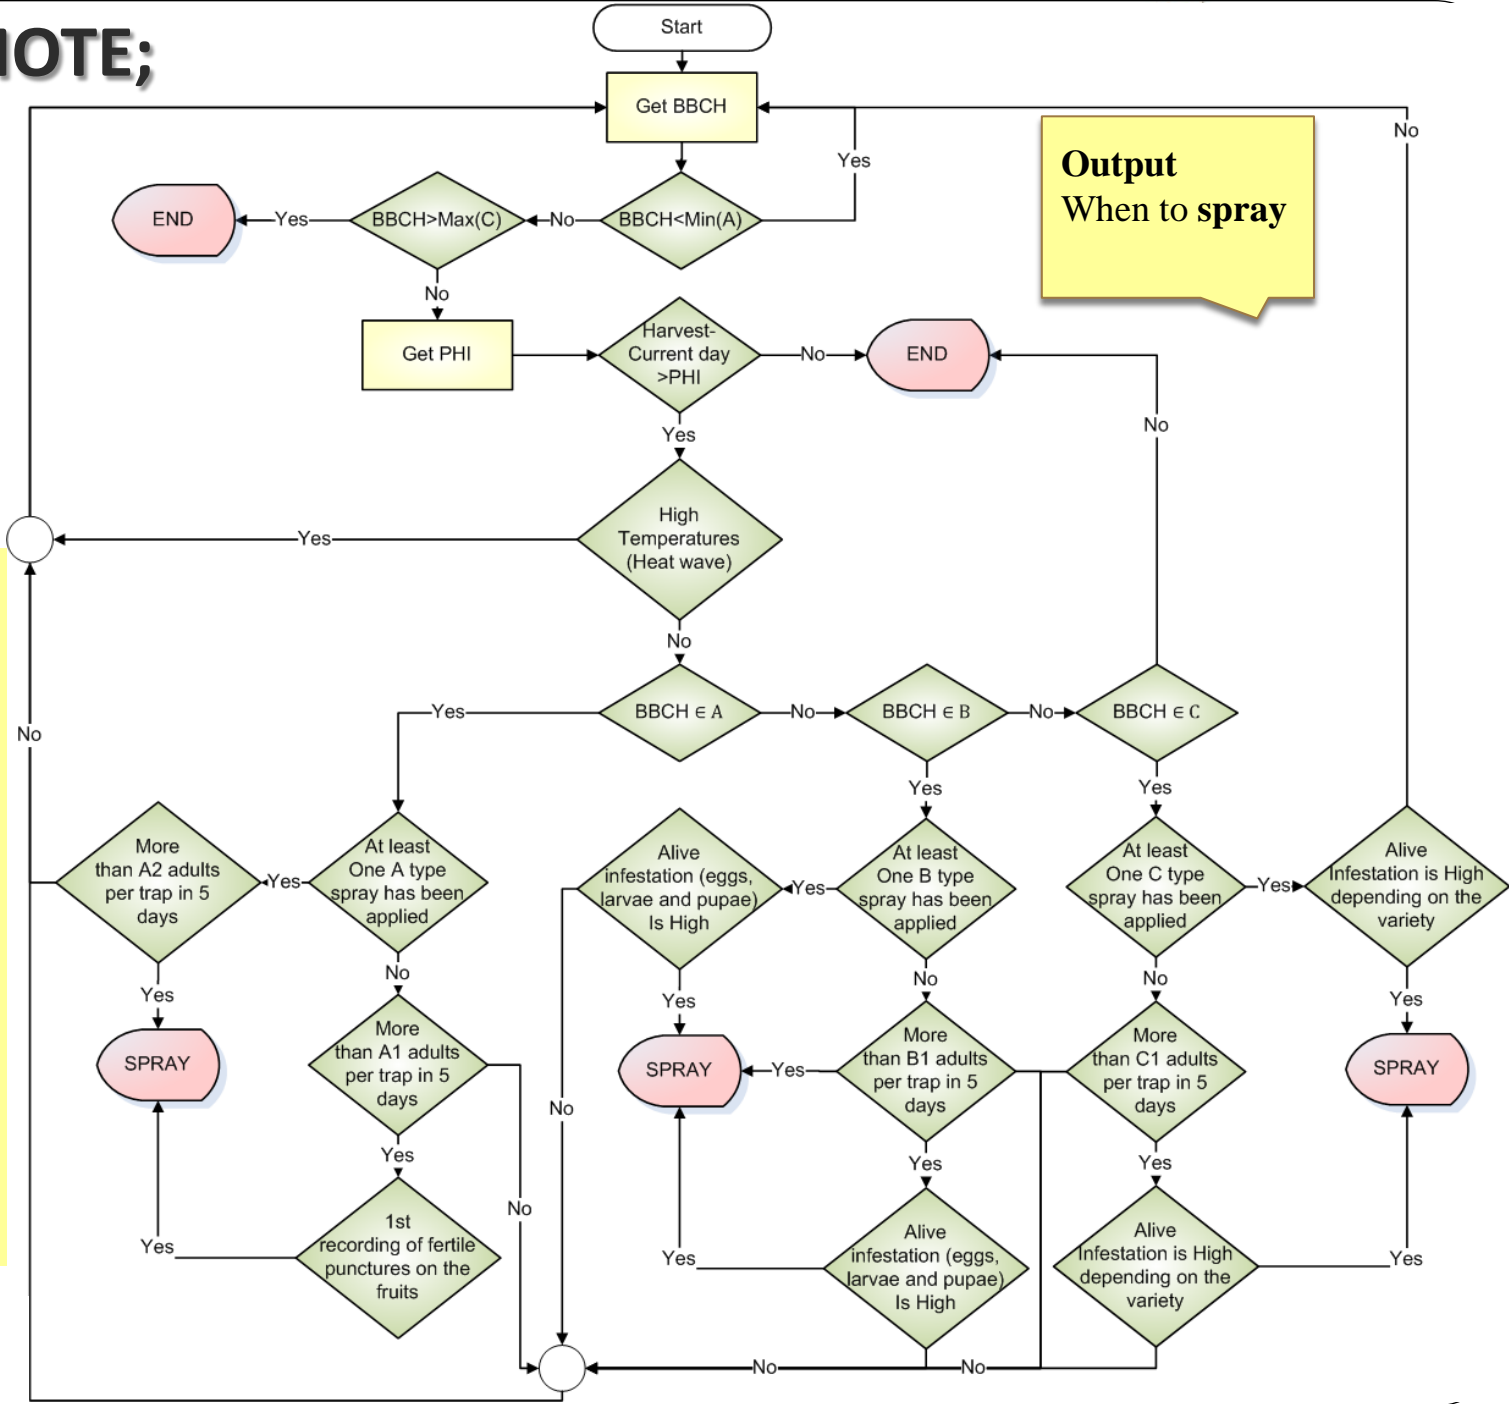

## Main Parameters

**BBCH** a scale used to identify the phenological development stages of the plant

**PHI** (Pre-Harvest Interval)

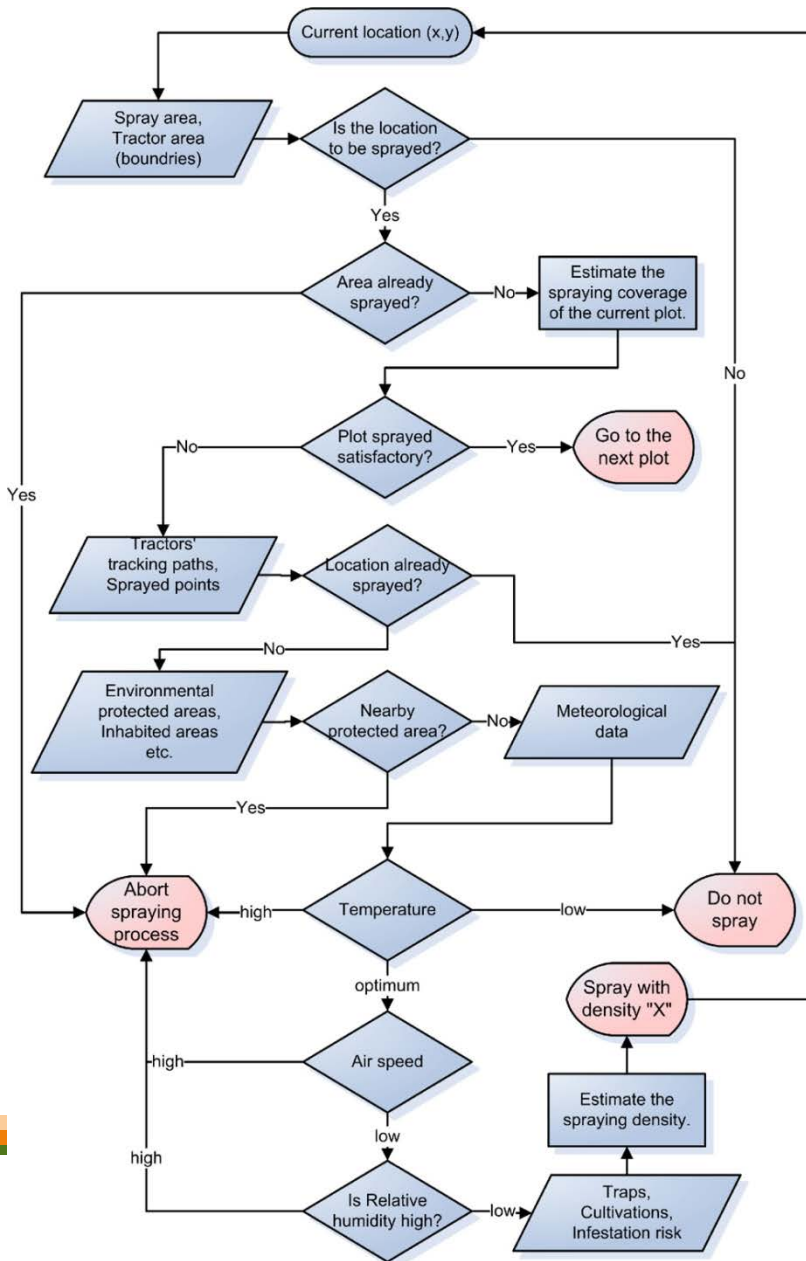

## Main Inputs

**Temperature**->WSN  
**Trap captures** (adults)  
 -> e-trapping, mTrapping  
**Alive Infestation**->mGIS

## 7. SPRAYING APPLICATION

- Type of spray: bait
- Weather conditions
- Adjust tractor tracking and areas to be sprayed according to: interpolation of pest risk, variety, fruit load, obstacles.

Parameters of the DSS B are shown in the following table.

#	Parameter (Type)	Value/Threshold	Notes
1	BBCH_A1 (Integer)	75	The lower limit of the A BBCH range
2	BBCH_A2 (Integer)	78	The upper limit of the A BBCH limit
3	BBCH_B1 (Integer)	78	The lower limit of the B BBCH range
4	BBCH_B2 (Integer)	80	The upper limit of the B BBCH limit
5	BBCH_C1 (Integer)	80	The lower limit of the C BBCH range
6	BBCH_C2 (Integer)	85	The upper limit of the C BBCH limit
7	A (Range Integer)	[BBCH_A1 - BBCH_A2)	The range BBCH for the 1 <sup>st</sup> spray
8	B (Range Integer)	[BBCH_B1 - BBCH_B2)	The range BBCH for the 2 <sup>nd</sup> spray
9	C (Range Integer)	[BBCH_C1 - BBCH_C2)	The range BBCH for the other sprays
10	MeanAdultsPerTrapPer5DaysA or A1 (Double)	2	The mean adult insect per trap and per 5 days for the 1 <sup>st</sup> spray
11	MeanAdultsPerTrapPer5DaysB or B1 (Double)	3	The mean adult insect per trap and per 5 days for the 2 <sup>nd</sup> spray
12	MeanAdultsPerTrapPer5DaysC or C1 (Double)	5	The mean adult insect per trap and per 5 days for the other sprays
13	NoFertilePuncturesOnFruitsA (Integer)	1	The number of fertile punctures on fruits
14	PerCentAliveInfestationOnFruitsBmin (Double)	1	The lower threshold of the per cent alive infestation on fruits for the 2 <sup>nd</sup> spray
15	PerCentAliveInfestationOnFruitsBmax (Double)	2	The upper threshold of the per cent alive infestation on fruits for the 2 <sup>nd</sup> spray

7th meeting of  
11-14 May 2015
